THE CLIENT

Sanlam

A distinguished financial services group known for its diverse offerings, including insurance, investments, and wealth management. With a strong commitment to innovation and customer-centric solutions, Sanlam is a trailblazer in the financial sector.

"Investing in our team's capabilities is investing in our future. We needed partners who could deliver world-class training."

INDUSTRY

Financial Services

ENGAGEMENT

Training Programme

FOCUS

WhereScape 3D & RED

THE CHALLENGE

Critical skills gaps limiting data potential

Tool Proficiency

Limited expertise in WhereScape tools hindered efficient data warehouse development and automation.

Manual Processes

Time-consuming manual data pipeline work slowed delivery and increased risk of errors.

Discovery Gaps

Inability to effectively visualise and model data for optimal architecture decisions.

Governance Needs

Lack of structured approaches to data governance and automated workflow management.

THE JOURNEY

How we made it happen

1

WhereScape 3D Training

- Data discovery intricacies and best practices
- Visualising and modelling data for optimal insights
- Efficient data pipeline design techniques

2

WhereScape RED Training

- Advanced Data Warehousing automation skills
- Building automated data pipelines efficiently
- Enhanced data governance through workflows

3

Practical Application

- Hands-on exercises with real-world scenarios
- Accelerated data integration techniques
- Knowledge transfer ensuring lasting capability

THE TRANSFORMATION

From learning to mastery

BEFORE

Limited WhereScape proficiency, manual data processes, fragmented skills, and time-intensive discovery workflows

AFTER

Connected skillset with WhereScape mastery, automated pipelines, data governance excellence, and accelerated insights

Ready for whatever comes next

By investing in training, Sanlam empowered their team to unlock the full potential of their data, from efficient data design to streamlined data warehousing. The engagement exemplified the power of skill-building in optimising data pipelines and yielding data automation.
