

DEVELOPING A TAILORED .NET SOLUTION FOR CLAIM PROCESSING

INTRODUCTION:

As part of the Blueprint Two initiative, a leading organisation engaged Engaging Data to develop a tailored .NET solution for claims processing.

The client required additional development resources to meet project demands and ensure timely delivery.

CLIENT BACKGROUND:

- Insurance
- Global
- Software Development, Test Automation and Project Management

The client faced resource constraints that prevented their internal development team from completing the claims solution.

To address this, they sought expertise in .NET Angular development, API integration, testing, and project management.

CHALLENGES:

The organisation encountered several challenges:

- Insufficient internal development resources to complete the project.
- Ensuring adherence to security policies, software development standards, and internal processes.
- Coordinating a multidisciplinary team across development, testing, and project management.
- Operating within the client's existing technology stack and tools, such as Virtuoso.

ENGAGEMENT:

The Engaging Data team provided a full-spectrum development solution, including:

- Deploying .NET Angular developers with expertise in front-end and back-end API integration.
- Providing a dedicated testing team, business analyst, and delivery lead to oversee development and quality assurance.
- Ensuring compliance with all security policies and software development standards throughout the project.
- Operating autonomously within the client's development department, designing the solution based on technical and business requirements.
- Conducting all development and testing activities using the client's technology stack, including automation tools like Virtuoso.
- Facilitating weekly meetings led by the Engagement Manager and Delivery Lead to review progress, address risks, and refine the delivery roadmap.

RESULTS:

The collaboration delivered key benefits, including:

- A fully developed and integrated .NET claims solution aligned with Blueprint Two objectives.
- Enhanced operational efficiency through a structured and compliant development process.
- Seamless collaboration between Engaging Data's team and the client's internal departments.
- Improved project visibility and risk mitigation through proactive engagement and reporting.

CONCLUSION:

By providing expert development resources and project leadership, Engaging Data successfully delivered a tailored .NET solution for claims processing.

The structured approach ensured adherence to security and development standards while enabling the client to achieve their strategic goals efficiently.
